TRI-FORCE

INGREDIENTS

Trichloro Isocyanuric Acid...60%
Other ingredients40%

ASSAY

Effective Chlorin assay is more than 45%.

What is Trichloro Isocyanuric Acid and how does it work?

Disinfectant. Used in culturing of poultry, silkworm, bee and drinking water disinfection, and used in prevention and treatment of fishery disease. Diluted 400 times to 100% kill H5N1 type of bird flu virus.

Key Benefits

1. Broad Spectrum use in poultry, swine, aquaculture, sericulture.
2. High chlorine assay with stronger disinfection per unit application – cost effective.
3. Used in H5N1 type bird flu virus disinfection.

DIRECTIONS OF USE

Poultry culturing disinfection: 200-500mg/L effective Chlorin for normal disinfection; 600-1000mg/L effective Chlorin for disinfection in disease period; 1200-2000mg/L effective Chlorin for swine pox virus disinfection; 1-2mg/L effective Chlorin for drinking water disinfection.

Silkworm culturing disinfection: Blend with Calcium Oxide in 1: 30, and add water in 1: 250, and spray or marinate. After 3rd. molter, blend with Calcium Oxide in 1: 100, and bestrew.

Bee culturing disinfection: Add water in 1:300, and spray or soak.

Fishery disinfection: Add appropriate clean water to dissolve this product, and splash to the whole pond. 0.4PPM for prevention, and used in every 15 days; 0.6-0.8PPM for treatment, and use every day for consecutive 2-3 days.

STORAGE

Keep in a cool and dry place.

NOTICE

Use wood, porcelain or plastic vessels when dilute or splash this product. Do not use iron or other metal vessels.

Prepare solution only when used, and do not use or stock this product together with acid and alkali material, and do not use at the same time with vaccines and vitamins.

Keep out of reach of children, and cautious about spattering into eyes.

PACKING

500g/plastic bottle and 20bottles/carton;
100g/plastic bottle and 100bottles/carton

APPEARANCE

White powder, with the smell of Chlorin.
